

ELS Poster Day Application 2019

:(Ap.2 have

remained largely unchanged over the past 10 years. While current research and practices have indicated that knee injury prevention programs for female athletes are effective, such efforts have yet to impact the overall likelihood or rate of injury.

Objective: The research question was how to implement a knee injury prevention program in a typically low incidence-rate sport (softball) for a non-contact knee injury. More specifically, could such
